FOR IMMEDIATE RELEASE | Otonabee Region Watershed returns to Normal status from a Level 1 Low Water Condition

The Otonabee Region Water Response Team has returned the Otonabee Conservation watershed to normal status.

The region's improved status from a Level 1 Low Water Condition to Normal is the result of increased regional-scale precipitation and lower evaporation.

The Otonabee Region Water Response Team includes representatives from local municipalities, water managers, tourism and agriculture, provincial and federal agencies, First Nations and Otonabee Conservation. For more information about the Low Water Response Program, visit our website at www.otonabeeconservation.com.
